Norad

# Folder structure {complete diagram}

---

# Folder structure

---

- Anything you moved you should tell your PI about
- Any questions on folder set-up to discuss with your PI

# Master script

---

- Master script location: {insert filepath here}
- Master script runs
  - Task A
  - Task B
  - Task C ...
- Other team members can run Master script if they change {insert line number here}

# Github

---

- Project repo: {insert link here}
- Project team(s): {insert link(s) here}
- Project repo contains:
  - Summarize what is now on GitHub (e.g. all do-files), if multiple rounds / types of data, show structure
  - Summarize what remains in project folder (e.g. data and final outputs)

# Github

---

- Github Demo
  - Show examples of commits made during bootcamp
  - Show example of issue that was solved and closed during bootcamp
  - Create and solve issue together
- GitHub workflow
  - TTL preferred role: **observer or contributor?**
  - Repo maintainer: **name**
  - Use issues for task management? **Yes/no**

# De-identification

---

- Project datasets that need to be de-identified:
  - List datasets here
- Does our analysis depend on PII?
- Plan for de-identification:
  - What needs to be done?
  - Who will do it?
  - What's the timeline? {depends on answer to analysis question}

# Data publication

---

- Data publication plan
  - What datasets need to be published?
  - Are any datasets currently ready for publication?
  - What's the timeline for publication?
  - Expected access restrictions when published?

# Replicable coding

---

- Tips I learned to make my code more replicable:
  - Talk to a rubber duck
  - ...
- What needs to be done for our project to be ready for push-button replication?
  - List to dos here

**Thank you!**
